Progress & Support Check In - Section 1

Introduction

For Employee

WHA's **Annual Development Cycle** is designed to foster a culture of continuous improvement and development across the organization as well as cultivate strengths and growth within individuals. This is accomplished through meaningful conversations between employees and managers throughout the year where performance growth and competencies are discussed, and relationship-building and well-being are prioritized.

The Annual Development Cycle consists of three phases with staff and clinicians and their supervisors or managers, beginning with goal setting, followed by focused check-ins and a final reflection discussion.

By filling out this form, you are completing the second phase of the cycle—the **Progress & Support Check-In**—which offers a focused time to celebrate progress & wins, remove obstacles, and ensure employee goals and well-being remain on track.

NOTE: Your Individual Development Plan is a key resource that we recommend you review and reference when completing this form.

Goals Progress 1

For Employee

Which of your goals have progressed the most or are you the proudest of since creating your IDP?

Employee Answer

POSEY, BRITTANY LYNN 10/31/2025 Edited

> **Security+ Renewal:** Completed 8 CEUs (50 required by July 2027); Please review and sign documentation for 3 additional units to fully meet 2025 goal (CEU requirements outline attached here, required letter to be signed is on your desk)
>
> **MD-102 Certification: Goal is first 2 learning paths of Endpoint Administrator course**
> Learning Path 1: MD-102 Explore endpoint management - 2/4 modules completed with 100% module assessment scores
> Learning Path 2: MD-102 Execute device enrollment - 0/3 modules completed
> Module completion records:
> https://learn.microsoft.com/api/achievements/share/en-us/googlefumaster-1164/DUGELN8J?sh
> https://learn.microsoft.com/api/achievements/share/en-us/googlefumaster-1164/82RCY9PW?sh

I made strong progress toward my first goal by completing 8 of the 50 required CEUs for my CompTIA Security+ renewal (which will also renew my A+ and Network+ certifications) through attendance at the 2025 Portland Cybersecurity Summit. While the event granted 8 CEUs instead of

the anticipated 10, I've prepared and attached documentation for a Work Experience CEU Activity worth 3 additional units. Once reviewed and signed by Gary, this will fully meet my 2025 CEU target and keep my renewal plan on track for Security+ recertification by July 2027.

In parallel—and indirectly related to my second IDP goal (MD-102 Learning Paths 1 & 2)—I've made major strides on revamping our Intune Build process to move from a labor-intensive, manual imaging workflow to a more efficient, automated, and scalable approach. Through extensive work with Platform Scripts, SCCM imaging, Autopilot enrollment (via CSV with serial numbers and hardware hashes), group tagging, dynamic groups, deployment profiles, and application assignments, I've substantially advanced the project toward eliminating manual steps and improving reliability.

Although the automation process is still in progress, the results so far have already shown significant value in reducing build time, improving consistency, and supporting long-term scalability. The experience has strengthened my expertise in Microsoft Endpoint Management while directly supporting WHA's goals of operational excellence and investing in our people and systems.

Goals Progress 2

For Employee

What obstacles have you faced with implementing your goals and how can your supervisor or manager help?

Employee Answer

POSEY, BRITTANY LYNN 10/31/2025 Edited

TL;DR - My manager can help by maintaining current support structure — the balance of focus time, collaboration, and check-ins is working very effectively.

One of the main challenges I've faced during this project has been translating our detailed, manual USB-based imaging process into a modern, cloud-managed Intune workflow. The original process involved dozens of precise technical steps—from managing Split WIM files and WHAScripts updates to configuring BIOS settings, Autopilot enrollment, and post-deployment group assignments. To successfully modernize and automate these steps, I first had to gain a

deep understanding of the existing process and then determine how each manual task mapped to equivalent Intune, Autopilot, and SCCM functions.

This required extensive research, experimentation, and validation to ensure that each automation phase would maintain the same reliability and flexibility as the legacy workflow. Through this effort, I've developed a much deeper understanding of Intune platform scripting, deployment profiles, group-based targeting, and Autopilot configuration management, all of which have been essential to the progress made so far.

I'm extremely grateful that Gary has provided dedicated focus time, collaboration, and consistent support throughout this project. That partnership has made a significant difference in being able to make meaningful progress on such a complex, ongoing initiative. I also want to acknowledge that Gary's flexibility and understanding when I needed to travel for family health matters have been invaluable—his support during those times helped me stay grounded and able to maintain steady progress despite the challenges. Continuing that same level of collaboration and flexibility will be key to bringing the project to full completion—it's working extremely well, and I wouldn't have achieved the strides I have without it.

Progress & Support Check In - Section 2

Well-Being and Satisfaction 1

For Employee

Share an example of when you felt most engaged and valued this year. What specifically contributed to that feeling?

Employee Answer

POSEY, BRITTANY LYNN 10/31/2025 Edited

I've felt most engaged and valued this year while working on projects that allow me to dive deep into scripting and process automation—particularly the Intune Build revamp and updates to our AdminTools PowerShell scripts for onboarding and account management. I really enjoy this kind of focused, technical work because it challenges me and gives me the space to problem-solve creatively while learning new skills.

One of the most meaningful moments of the year was hearing early feedback from Katie about the new Intune process; she said it was already significantly easier to use than o. Knowing that

the time and care I put into automating those steps had a real, positive impact on someone's day-to-day work made me feel proud and re-energized to keep improving our tools and systems.

I've also noticed that receiving acknowledgment or recognition—whether verbal, written, or through channels like AwardCo—has a strong positive impact on my engagement, especially during longer-term projects where outcomes take months to materialize. Even small notes of appreciation along the way help me stay connected to the broader purpose behind the work and reinforce that the effort I'm putting in is making a difference. That sense of practical impact—and Gary's continued support in giving me the autonomy to work deeply on these projects—has made the biggest difference in keeping me motivated and invested in my work.

Well-Being and Satisfaction 2

For Employee

Is there a strength or special skill you are currently not using in your role, or on your team, that you would like to contribute?

Employee Answer

POSEY, BRITTANY LYNN 10/31/2025 Edited

I know that process design and documentation—especially around automation and scripting standards—is something I should continue to prioritize, and I've been making that more of a focus lately. I've started taking notes and documenting as I work on projects like the Intune Build revamp and AdminTools scripts so I can capture the details accurately in our team wiki instead of trying to reconstruct everything at the end. Strengthening our wiki with clear, reusable documentation supports consistency, knowledge sharing, and long-term sustainability for the team.

While I don't necessarily think of myself as a mentor, I do see real value in teaching or walking someone through the inner workings of the scripts and processes I've built or refined—if anyone on the team wants to learn. Sharing that knowledge would help ensure continuity and make it easier for others to build on the work I've done.

Progress & Support Check In - Section 3

Accountability

For Employee

What do you need to be successful in achieving your goals this year (ex: tools, resources, time, support, etc.)?

Employee Answer

POSEY, BRITTANY LYNN 10/31/2025 Edited

I feel that I have everything I need to be successful in achieving the goals we've set for this year. Gary has done an excellent job of helping me manage priorities by reassigning or closing out other tasks when needed so I can stay focused on my key projects and development goals. That balance has made it possible for me to make meaningful progress on complex, long-term initiatives like the Intune Build automation and documentation improvements.

At this point, continuing with the same level of focus, support, and communication will keep me well-positioned to meet/exceed the objectives we outlined in my IDP.

Progress & Support Check In - Section 4

Supervisor / Manager Summary

For Supervisor

After reviewing the employee's IDP and discussing their Progress & Support Check-In responses, please note any adjustments, recommendations, agreements, or actions that surfaced in your conversation.

NOTE: Notes added here will be visible to the employee only after the supervisor or manager has approved and finalized the form.

TO SKIP THIS STEP, ENTER 'N/A' IN THE BOX BELOW.

Supervisor Answer

Henderson, Gary 01/11/2026

Brittany has made solid progress on her IDP goals, particularly in the work around Intune Build automation and endpoint management improvements. While she may not have completed the

training, she has gained extensive real-world experience with Intune. It was strong work. Nice job.

Next year, as a team, we will work on finding a better way to balance training with day-to-day responsibilities and project work. I appreciate Brittany's focus on completing the Intune project.
